Hikeem Washington	HikeemMWashington@gmail.com	I am sincerely opposed to any increased development to this region due to environmental & heath concerns. Preservation of this area is vital.	
		Please do not allow more development in the Highlands area. Do not lessen regulation of the Highlands! NJ's residents rely on the Highlands as a resource for fresh clean water. And at a time when rampant development in our denser cities, like Jersey City, we need that resource more than ever.	
		Unintended consequences that could directly or indirectly arise from greater development could mean we end up with a situation like Flint, needing to avoid the water in our taps. Certainly, it would mean higher prices for water, and those costs will be more greatly borne by the less advantaged of our citizens and communities.	
Barbara Klinger	barbara.klinger@gmail.com	Please do not change the current regulatory scheme.	28 Duncan Ave., Jersey City, NJ 07304

diane berry	zack05.189@gmail.com	we don't want to be another Flint-leave our water alone

Maria Masilang	Stockchic@gmail.com		
Patricia Jenatsch	Pjenatsch@gmail.com	The New Jersey Highlands Region Provides Clean, Low-Cost Drinking Water To Over 70% Of New Jersey. Yet, A New Proposal by The Department Of Environmental Protection Would Allow For A 400% Increase In The Development Density Of This Area.	51 Winding Way, Morris Plains, NJ 07950-1862 United States

In 2004, the NJDEP created the Highlands Water Protection and Planning Act to protect the Highland's critical water supply, which provides clean and safe drinking water to over 5 million New Jersey residents. These regulations included stringent land use rules aimed at preserving the most environmentally sensitive, largely forested portion of the Highlands. The DEP's commitment to protecting this important resource and the open space that surround it was an important step in creating a safer, more environmentally conscious New Jersey..

However, a recent amendment to these regulations proposed by the DEP weakens this commitment by increasing the development of this area. This directly conflicts with the measures of protection the original act fought for. The proposal would allow for a 400% increase in the development density of this region, through the loosening of the Highlands Act regulations and standards.

Most notably, the proposed new standards do not promote the restoration of water quality, potentially affecting millions of residents throughout New Jersey. This is unacceptable as New Jersey has had a high incidence of pollution and Superfund sites. The State's water system must be protected at all costs for its citizenry. How can we even consider leaving the rivers, lakes and reservoirs at the mercy of developers.

Five million New Jersey residents will have their drinking water contaminated

		and endangered should this proposal be passed. Please do not let this happen, safeguard New Jersey's drinking water as it is your mandate to do so.	
selin vargas	selina.vargas@hotmail.com		45 mercer st, jersey city, New Jersey 07302 United States
Ethan Dropkin	edropkin@gmail.com	NYC has some of the highest quality drinking water of an urban center on the planet. How do they achieve this? By protecting the watershed that provides that water. Our drinking water is not even close to that good already, please don't make short-sighted decisions that will detract from its quality further. Money is a useful tool in our society but largely in the short term, (relatively) undespoiled resources are priceless in the grand scheme. Please choose wisely and don't be blinded by greed masquerading as good sense.	Jersey City, NJ
Seth Danberry	sethd1@gmail.com		Jersey City, New Jersey United States

		deliberately.	
Patty Cronheim	Pcronheim@comcast.net	It's great that Jersey City is looking at the big picture!!!	
Robert Rubinsky	basket522@aol.com	I strongly oppose the DEP proposed amendment to the Highlands Water Protection and Planning Act. We need to maintain the stringent land use rules and preserve this portion of the Highlands. Millions of New Jersey residents currently depend on this resource to provide clean, low-cost drinking water. Millions more will depend on it in the future.	83 West 30th St, Apt # 2, Bayonne, NJ 07002 USA
Karen Cuttler	kscuttler@gmail.com		Jersey City, New Jersey 07302 United States
Murali Adusumilli	adusumk@gmail.com	I want a clean water supply to JC be improved and Water Bills are very high compared to other towns	900 Pavonia Ave, Jersey city, New Jersey 07306 United States
Rosa Setkiewicz	Rosasetkiewicz@gmail.com	With all the issues with our drinking water across America .i am surprise you would mess with our drinking water. . Keep away from our highlands.	965 summit ave, Jersey city, Nj 07307
Daniel Tumpson	symbitar@aol.com	The New Jersey Highlands region provides clean, low-cost drinking water to over 70% of New Jersey. Yet, a new proposal by the Department of Environmental Protection would allow for a 400% increase in the development density of this area. Obviously, this proposal to increase development in the NJ Highlands will impact over 5 million of New Jersey residents who will lose fresh water resources. But it will also impact the natural Highlands itself and the plant and animal wildlife that live there -- and no benefit will be gained except for a small group of developers who will make profit from the development.	230 Park Ave #5S, Hoboken, NJ 07030 USA

		<p>Please do not allow the amendment to the regulations protecting the NJ Highlands proposed by the DEP which weaken wildlife protections by increasing the development of this area to be adopted. Keep the NJ Highlands fully protected to preserve this natural habitat and to protect our drinking water resource.</p> <p>Thank you.</p>

Linda McTeague	lbmcteague@yahoo.com		Basking Ridge, NJ 07920
		<p>In 2004, the NJDEP created the Highlands Water Protection and Planning Act to protect the Highland's critical water supply, which provides clean and safe drinking water to over 5 million New Jersey residents. These regulations included stringent land use rules aimed at preserving sensitive, largely forested portion of the Highlands. The DEP's commitment to protecting this important resource and the open space that surround it was an important step in creating a safer, more environmentally conscious New Jersey.</p> <p>The DEP's recent amendment proposal to these regulations severely weakens the commitment to preserving or environment and clean drinking water for New Jersey.</p> <p>What is the logic and who benefits from these regulation changes? It certainly isn't the people of New Jersey....</p>

Sheldon Bart	WildResch@aol.com		7302
Joseph Basralian	jbbasralian@gmail.com	The proposed rule changes to loosen development restrictions in the Highlands concerns and angers my family and me. In New Jersey we get a bad rap about most things (especially the sprawl of development, the underinvestment in socially shared assets such as bridges and wastewater treatment, and the lack of planning for the future, such as with our state pension fund). But at least we take comfort that we still have relatively clean and plentiful water. I am horrified that the State is planning to attack this asset as well, as a short-term giveaway to a select few, in favor of what so many people DISlike about NJ -- sprawl, pollution worries, and lack of planning. There is positive economic development in the Highlands currently, under existing rules that also protect water quality for millions of people. There is NO general public interest in changing that, only some near-term special interest. Changing those rules, which were created with great seriousness, thought and care,	24 Fairfax Terrace, Chatham, NJ 07928 United States

		<p>will be deleterious to the public welfare.</p> <p>State officials should review the "101" about what it is about development that impairs water quality:</p> <p>Some people might assert (correctly) that the total volume of water remains the same under the different land use scenarios; it is simply the pathway that the rain follows that changes. More or less rainfall runs off the surface rather than infiltrating into the ground. Although this is true, the pathway followed makes a major difference in stream characteristics and health. Some of the results of increased runoff are described below:</p> <p>Increased frequency and severity of flooding. If the runoff from a storm is greater, the chance of the flow exceeding the stream capacity and causing flooding increases. Reduced ground water recharge. Water that runs off, particularly if it is channeled through storm sewers, never has a chance to recharge ground water. This could be cause for concern, because 60% of drinking water in Indiana is provided from ground water, and ground water provides base flow to streams throughout the year.</p> <p>Decreased base flow in streams. Base flow is the water that flows even during dry periods. Aesthetically, most people prefer to look at a stream that has water throughout the year rather than one that is periodically dry. More important, continuous base flow is vital to the health of aquatic life in the stream.</p>	
--	--	--	--

		<p>Increased erosion. Stream channel erosion is an important source of sediment in channels. Erosion is very dependent on flow. Doubling of the flow may cause the streambank erosion to increase by a factor of 4 or more.</p> <p>Reduced natural filtration of the water. The process of passing through the soil is one of the most important purifiers of water. Many pollutants are filtered, attached to soil particles, or eaten by microbes as water passes through the soil. Bypassing this route has a severe negative effect on water quality.</p> <p>Negative impact on stream health. Streamflow varies even under natural conditions, and most aquatic life is adapted to this. But increased streambank erosion due to higher peak flows and periods of very low flow due to the decreased base flow add stress for many organisms.</p> <p>Pollution Sources & Land Use:</p> <p>Besides the effect on flow, land use directly affects water quality in many other ways. To understand these effects, it helps to understand the difference between point source pollution and nonpoint source pollution.</p> <p>Point source pollution refers to contaminants that enter the water directly, usually through a pipe. The specific location where the pollutant enters a stream can be identified, because it is usually at the end of a pipe. Examples of point source pollution are sewage treatment plants (which treat wastewater but still release a</p>	
--	--	---	--

		<p>regulated amount of pollution in their discharge) and industrial sources. Point sources are easier to regulate than nonpoint sources and were the original target of the 1972 Clean Water Act that has dramatically improved the quality of many U.S. rivers and streams. Although point sources were formerly the worst culprits in impairing water quality, most point sources have greatly reduced the pollution they discharge as a requirement of the permits they must obtain.</p> <p>Nonpoint source pollution, also known as "polluted runoff," is different. The exact location where this type of pollution enters a stream cannot be identified because it comes from entire landscape areas: anywhere that rain falls and carries pollutants as it runs off. Your driveway and the road near your house may be sources of pollution if spilled oil, leaves, or other contaminants flow from them to a stream. Agricultural areas, because they occupy so much of the Indiana landscape, are important sources of pollution when rainfall carries sediment, nutrients, or chemicals to streams. Urban areas also are the source of important, but sometimes different, nonpoint source pollutants. Nonpoint source pollution is currently the major water quality problem in the U.S. - and nonpoint source pollution is directly related to land use. Common nonpoint source pollutants in agricultural areas are sediment, pathogens, nutrients, and pesticides. Common nonpoint source pollutants in urban areas are sediment, pathogens, nutrients, oxygen-demanding substances, heavy metals, oil and other petroleum products, and road</p>	
--	--	---	--

		<p>salt.</p> <p>Sediment is the largest pollutant in Indiana by volume. It affects aquatic life, shortens reservoir life, and complicates water treatment. Its sources are cropland erosion, construction sites, washoff from streets and other impervious areas, and streambank erosion. Streambank erosion in particular is increased by the added runoff due to development.</p> <p>Pathogens include E. coli (a bacteria used to indicate the presence of fecal waste) and other viruses, bacteria, and protozoa. The source of most pathogens is fecal material from any warm-blooded animal. In agricultural areas, sources include wildlife, livestock manure, and malfunctioning septic systems. In urban areas the major sources are pet wastes, wildlife that may be present in high numbers (such as birds), septic systems in unsewered areas, and sewage treatment plant discharges (which are considered a point source). A particularly significant source is the outfall from combined sewers, where raw sewage in combination with urban runoff is allowed to bypass the treatment plant during storms. Although combined sewer overflows are an urban source, they are rarely a concern related to current development, because new areas have separate sanitary and storm sewers.</p> <p>Nutrients of concern are primarily nitrogen and phosphorus. High concentrations of nitrate in drinking water are toxic to infants and may be harmful to pregnant women. Nitrate in the</p>	
--	--	--	--

		<p>Mississippi River is one cause of hypoxia in the Gulf of Mexico. Hypoxia is a zone of low oxygen where fish cannot live. Phosphorus leads to overproduction of algae that clog lakes and reservoirs. Sources of nutrients in agricultural areas include fertilizer, livestock manure, and septic systems. Sources of nutrients in urban areas are fertilizer used on lawns, gardens, and golf courses; pet waste runoff; and discharge from sewage treatment plants or industry.</p> <p>Pesticides can be a concern in drinking water supplies that use surface water. Pesticide concentrations in most Indiana streams in agricultural areas rise above drinking water standards after application in the spring, but these elevated concentrations do not typically last long enough to be a violation of drinking water standards. Sources of pesticides are simpler to identify than sources of pathogens or nutrients. They are limited to pesticide application, either in agricultural or urban areas. Studies by the US Geological Survey in the White River Basin found that concentrations of primarily agricultural pesticides such as atrazine are much higher than concentrations of any pesticide used primarily in urban areas. However, concentrations of certain pesticides, such as diazinon, an insecticide for lawns and gardens, were higher in urban areas.</p> <p>Oxygen-demanding substances consist of organic matter that depletes dissolved oxygen when decomposed by microorganisms. Dissolved oxygen is critical to maintaining</p>	
--	--	---	--

		<p>water quality and aquatic life. Studies have shown that urban runoff with high concentrations of decaying organic matter (such as leaves, grass clippings, and other organic debris) can severely depress dissolved oxygen levels after storm events.</p> <p>Metals include lead, copper, cadmium, zinc, mercury, and chromium. They can accumulate in fish tissues and affect sensitive animal and plant species. One of the major causes of fish consumption advisories in Indiana is mercury. Sources of metals are automobiles (copper is lost from brake pads, for example), industrial activities, illicit sewage connections, and atmospheric deposition (for example, mercury that is released into the air from combustion and then falls to earth in rainfall at another location).</p> <p>Oil and other petroleum products degrade the appearance of water surfaces, impair fish habitats, and may be toxic to sensitive species. Sources are oil leaks; auto emissions coming off parking lots, roads, and driveway; and improper disposal of waste oil. Concentrations of petroleum-based hydrocarbons are often high enough to cause mortalities in aquatic organisms.</p> <p>Road salt increases levels of sodium and chlorides in surface and ground water. Snow runoff produces high salt/chlorine concentrations at the bottom of ponds and lakes. Not only does this condition prove toxic to certain organisms, but it also prevents crucial vertical spring mixing.</p>	
--	--	---	--

		<p>***</p> <p>Please do NOT amend Highlands regulations in any way that further intensifies land development. There is already economic development in the Highlands, within rules that make sense for our state.</p> <p>Joe Basralian Chatham Township</p>

Margaret Meyers	Mmmeyers27@yahoo.com		
Mary Kulakowski	mkulakowski2@me.com	The Department of Environmental Protection works just like the "Fish and Wildlife	

		<p>Service." The FWS exterminates animals and fish and DEP allows others to wreck the environment. Start having some INTEGRITY: do the RIGHT THING (even if you didn't say it), the RIGHT WAY, ALL OF THE TIME. Translated, that means PROTECT THE WATER SUPPLY from further contamination.</p>	
Marie Ebert	ebertm3@gmail.com	<p>Don't let developers get away with anything. Stay the course that was initially proposed and DO NOT make decisions that will effect the water supply. Let the developers use technology to create modern sewerage systems that do not effective water supply. Look at University of Vermont's Aiken Center for 21st century approaches to sewerage. Out with the old in with the new.</p> <p>I also wonder what kind of development causes 400% percent increase in density. That area is not exactly robust with job opportunities.</p>	
Marea Wilson	coyheat@msn.com	<p>Any rule or proposal that does not restore or improve its original state is just another theft of our resources. There are many areas throughout NJ that could use some re-habilitation or rebuilding what has been outdated and wasteful properties as population and commercialization increases. Further, any attempts at fracking in NJ will meet with heavy confrontation from the public who sees its resources expunged and taken for no other reason than to turn profits. Perhaps its time to look for business and development that fits our own environment rather than we should compromise and sacrifice for a few low paying jobs, the resources millions depend on now and for their future.</p>	Jersey City, 07306

Blondel Francis-Pryce	bbrown@mcny.edu	Please Legislators of Jersey City, help protect our natural resources such as our water. This proposed new standards of the DEP does NOT promote the restoration of water quality for New Jersians. In theory, this will affect millions of our citizens all over New Jersey. All in all, the DEP future plan is an endangerment to our water supply.	274 Ege Avenue, Jersey City, NJ 07304 Hudson
Donald Moschberger	donaldrm@verizon.net	<p>I say No to any development in the water shed that provides New Uersey citizens with clean, healthy water, No, to the money grabbing developers who wish to profit at any cost to the state's citizen. I say no to their empty promises that their development will have no effect on the water supply.</p> <p>DEP - you job is the safety of our water supply and not selling it off foe profit.</p> <p>Sincerely, Donald Moschberger</p>	519 Central Avenue, Apt. 5, Jersey City, BH 07307 USA
Eric Fiore	eric.fiore@live.com	History has shown that actions which threaten water supplies can have damaging and expensive consequences for residents that rely on public aquifers. Even small intrusions into these environments can destabilize a resource that is vital to human life. Sometimes we think that financial gains made by policies can outweigh the potential negatives. Surely the governing bodies in Flint Michigan believed in such untruths. Equally likely those same bodies believed they had thought every contingency through and no damage could result from their actions. Please keep these thoughts in mind when you think of the highlands.	70 Bullman Street, Phillipsburg, NJ 08865 Warren

Leah Farrell	Leah2b@yahoo.com		
		Pure water to serve as a source of potable water for cities and communities throughout the state of New Jersey is a critical element in the sustained growth and maintenance of such cities and communities. Suitable sites for the construction of additional surface reservoirs are increasingly scarce and will become even harder to find if further development is allowed in the New Jersey Highlands. Similarly, uncontaminated groundwater that could be tapped with wells for the supply of water is becoming an ever rarer commodity and would be further threatened by additional development in this sensitive area. I therefore strongly oppose any further increase in the development permitted in the New Jersey Highlands Region. As a Civil/Environmental Engineer, I know all too well that once an area or resource is contaminated, it is extremely difficult and expensive to recover it and restore it to even a semblance of its former quality . It would be absolutely irresponsible to allow rampant development in this critical area as that would almost certainly adversely impact the quality of existing and future water supply that are critical to the continued well being of cities and communities throughout northern New Jersey.

		<p>Outrageous to even THINK of lessening protection/preservation standards for New Jersey's Highlands watershed areas! Do you realize how delicate the ecosystem already is in the state and in the Highlands?! Newer houses have already been built UPSTREAM and UPHILL from the Splitrock Reservoir in Rockaway Twp./Kinnelon Twp. What do you think happens when they spread their lawns with fertilizer, and then it rains?? Have you seen the polluted foam ALREADY gathering on stream tributaries into the Splitrock and other reservoirs?? Do you know how degraded the surface water quality has become in basically all of New Jersey? How could you NOT protect, preserve, and upgrade the water quality standards, starting with the watershed forests?! Are greedy builders unduly influencing this decision-making process? How incredibly STUPID and short-sighted that would be?! Or maybe you decision-makers don't use water?</p> <p>Wake up and put your priorities in place! Please! Once the precious watershed resource is degraded, it can't be undone!</p>

W. Reed Gusciora	asmgusciora@njleg.org	As a State legislator and long time advocate for environmentally sensitive	144 West State Street, Trenton, NJ 08611 United

		<p>policy, I find the proposed changes to N.J.A.C. 7:38-3.4(b) to be reprehensible. Serving over five million citizens, the Highlands provide over 70% of clean drinking water in New Jersey. When the legislature passed the Highlands Water Protection and Planning Act in 2004, its intent was clear: to protect the Highlands from unnecessary and hazardous intrusions, and to maintain the quality and security of one of our State's largest water reservoirs. The Department's proposed changes allow for the opposite, by promoting development in the area. The new rules would allow for an astronomical increase in development density - upwards of 400% - in this sensitive environment, which would inevitably lead to contamination of the surrounding area, as well as the water supply. I find this proposal to be in line with the ethos of much of the Christie administration's policy: short-term benefit for the few in exchange for long-term detriment for the many. As administrators and legislators, it is our responsibility to undertake action that will provide for a better future for our State; proposals such as this make it clear that not all of us are willing to live up to that responsibility.</p>	States
Andrew Gargano	andygargano@gmail.com	<p>The proposed rule change will severely diminish our clean water resources in the State, which serves millions of people and wildlife and ultimately will render our water supply comparable to third world countries. Diana Ellers	Dipan@earthlink.net	I oppose development of the New Jersey Highlands. This area has provided me with clean water and I do not want to see my water contaminated through increased development!	42 Hopkins Ave, Jersey City, NJ 07306 Usa
Steve Comeau	comeaus1@verizon.net	The proposed amendment doesn't appear to consider or reflect on the related or collateral impacts on the ecosystem that might come wth permitting a higher density of septic systems in the Highlands area, e.g. conversion of existing	1624 King St, Fanwood, NJ 07023

		lands into roads, driveways, homes, etc. These conversions also have a significant impact on the movement and quality of water in the region.	
Donna Fetchko	dfetchko@aol.com		
Johnny Colon	jcolon.2012@gmail.com	The Highlands is a precious source of water for more than half of New Jersey residents and also a sensitive forested area that is home to many species of plants and animals. It is a gem that should not be tampered with nor destroyed. New Jersey must remain environmentally conscious and friendly not just to the forests but also to its residents who depend on the Highlands' water supply. We must protect this natural treasure.	454D BERGEN ST, Newark, NJ 07108 United States
Sam Choi	sschoi74@hotmail.com		
Celia Obedencio	celiaobe@verizon.net	I am submitting my opposition to any amendment that would cause endangerment to our water supply quality in New Jersey. I have no specific knowledge on what issue DEP was soliciting public comments through July 15. However, any proposal that would affect the clean and safe water supply in NJ I would 101% oppose.	
Richard Grant	RDGNJ@AOL.COM	I oppose the proposed amendment to the New Jersey Department of Environmental Protection regulations that would allow for an increase in the developmental density of the Highlands Region because the overriding concern must be to protect the water supply of the Highlands Region. Thank you.	290 Anderson Street, Apt. 3J, Hackensack, New Jersey 07601 United States of America
Jill Pustorino	jillscipione@yahoo.com		74 West 46th Street, Bayonne, NJ 07002 United States
Larry Baum	larry_baum@alumni.tufts.edu	I'm extremely concerned by these proposed changes. As it is my town already suffered from a number of it's wells	Rockaway, NJ 07866 USA

		<p>having been declared Superfund Sites and the last thing we needs is more potential sources of pollution of any kind.</p> <p>In fact, the last thing the NJ Highlands needs is any more development. NJ is already has the highest populations density in the nation. We don't need more cars, more traffic, more air pollution, more water pollution. Enough is enough we need the last few beautiful, natural areas just left alone. How greedy can you get?</p> <p>Will NJ remain a livable place or not?</p> <p>Again and again people have voted for Green Acres preservation. Why should a few land speculators make a killing and destroy the quality of life for everyone else and potentially even poison our kids?</p> <p>There was great support for this act and in getting it to pass don't forget that other concessions were already given away to developers. You, the DEP, are supposed to work for the people, not against them. And you are not supposed to break our trust by breaking the promises of the original deal.</p> <p>I don't care about Chris Christie wanting to score points with his party on the national level by showing he can sell out his state, his people to corporate interests to his 'bona fides'. I care about our state and our citizens and our quality of life here.</p>	
Ilze Baum	greenent4@verizon.net	<p>These changes are immoral.</p> <p>You already gave away some concessions when these rules</p>	Rockaway, NJ 07866 USA

		<p>were made, so to keep the concessions and now get rid of these rules, that just sounds like dirty tricks as usual.</p> <p>DEP is supposed to protect the citizens of our state, not sell us out. Too many people have already had to drink fouled water in our state. The traffic, over development, it's already almost too much.</p>	
Modris Baum	bz22nxn2@verizon.net	<p>I'm a very strongly against these proposed rule changes. I already pay enough to get our polluted water sent through cleaning plants.</p> <p>I don't want to see more of the last few remaining beautiful places developed either. We have too much habitat fragmentation as it is.</p> <p>If these rules go through I will never forgot who pushed them through when it comes to voting in the future.</p> <p>I thought the DEP was supposed to protect our health and our general quality of life not sell us out to a few land speculators.</p> <p>I thought the DEP was supposed to work for the people of NJ not to further the national aims of a single politician trying to prove he can sell out the environment and U.S. citizens to prove himself to his national party.</p>	NJ USA
Nancy Booth	boothnancy2011@hotmail.com		6215 Blvd. E, WEST NEW YORK, NJ 07093 United States
Debra Bilous	bullets1942@yahoo.com	I live in Oak Ridge basically in the center of the Highlands and surrounded by many of the resevoirs. This area needs to be protected to maintain the integrity of the resevoirs. 400%	7 oriole rd, Oak Ridge, New Jersey 07438 United States

		increase in development will be a disaster. Please protect the Highlands and our water quality.

Thomas Lyons	thomasly1@verizon.net	Please help protect and keep our water Clean!!!	BAYONNE, NJ 07002 USA
		This is not just about water and people. It's about: plants, insects, birds, mammals, reptiles, microbes, oxygen, filtering of pollution, intrinsic value, awe inspiring beauty, leaving a natural legacy to future generations, planet Earth, etc. It seems that ALL of our local, state, and national agencies that are supposed to protect the people, land, air, water, wildlife, etc., have been infiltrated by special interests (moles from big business) that then use their position of power to lobby for big business and the wealth of a few. Enough is enough already! It's time for the revolving door between private industry and local, state, and national agencies to CLOSE! It seems that "We the People" always have to protest to get agencies like the Department of Environmental Protection to do their job and PROTECT THE ENVIRONMENT! Do the right thing and uphold the 2004 Highlands Water Protection and Planning Act!!!	
Michael Britt	sootyshear@gmail.com		7002
Noemi Escobar	noemi.escobar@cbmoves.com	By developing the region you will be loosening the Highlands Act and will affect our water. Aren't you suppose to protect the Citizens and not harm them? This proposal should not be going thru !!	10 Fowler Avenue, Jersey City, NJ 07305 Hudson

Julie Stroffolino	jewels1864@aol.com		NJ 07920 USA
Shayna Marchese	shayna.marchese@gmail.com		Jersey City, NJ 07302
Hugh Carola	hcarola@verizon.net	There is NO reason whatsoever to loosen Highlands protections. The agency is being used by the governor to further HIS agenda and to curry favor with the right wing of the GOP - at the expense of OUR drinking water and the wetlands and forests that protect it.	617 Spring Valley Rd., Maywood, New Jersey 07607 United States
Rianne Wessells	RLHelwig@aol.com		Bayonne, NJ 07002 USA
Sheila Welch	Sheila.welch@verizon.net	This will destroy NJ further than Gov Christie has already destroyed it - save our Highlands and the water supply.

Rahat Chatha	rchatha82@yahoo.com		Jersey City, New Jersey 07306 United States
Doris Suro	Dorissuro@comcast.net	I strongly appose on the Dep proposal to do construction on the highlands and contaminate our most precious resource our drinking water.	Jersey City, 07304 Hudson
kenneth johnson	qmaxusa@yahoo.com		7018
Silvia Solaun	friendsofpartamountain@gmail.com	The NJ DEP has gotten away from their mission to protect and preserve NJ Natural Resources, like our water and hence we are opposed to the proposed changes to the Septic System Density Standards for various reasons. The first being, the science used to "justify" the proposed changes is bad science and hence should be thrown away. Secondly, in today's world we should be upholding our water	SPARTA, New Jersey 07871

standards not lessening them!
Clean, safe water is essential to life and we should not allow any lessening of the standards and put development over the wellbeing of people!

Thirdly, the NJDEP should be concentrating their efforts in upgrading the inefficient and failing infrastructure of our water supply, not lessening the standards and weakening the Highlands Act.

The Highlands Act should be upheld and the NJDEP should not be acting in the interests of the developers, farmers and other private interests over the welfare of the 70% of NJ residents who get their water from the Highlands region!

Shame on the NJDEP for even considering this option and please remember the 6M NJ residents rely on the Highlands area for their drinking water.

Do you want your legacy to be that you were responsible for creating the next Flint Michigan? I hope not! So I encourage the NJDEP and our legislators to do the "Right thing" for NJ and for the 6M NJ residents who get their drinking water from this region and oppose the changes in the septic system density standards.

Here's an Indian Cree quote to sum it all up, "It is not until the last tree has been cut, the last fish been caught, and the last river dried up, that man will realize you cannot eat money"

		<p>*Oppose the proposed changes and protect NJ's drinking water in the Highlands region- Thank you!</p> <p>Respectfully,</p> <p>The Friends of Sparta Mountain</p> <p>Sparta, NJ</p>	
Amy Kommatas	amykommatas@yahoo.com	<p>Please continue to protect our valuable natural resources and prevent development of the Highlands area!!! That region provides clean, low cost drinking water to over 70% of NJ. We dont need more development for the sake of development!</p>	<p>83 Montgomery, M, Jersey City, New Jersey 07302 United States</p>
virginia barta	lechatperche@verizon.net	<p>The DEP should stop trying to circumvent the purposes of legislation to protect our clean water supply. It is vital to prevent increased land development in environmentally sensitive areas.</p>	<p>216 alexander ave, montclair, nj 07043-1509 essex</p>
Thomas Gada	tomgada@gmail.com		
Julia Unferth	junferth@gmail.com		
Toniann Keiling	cheerangel2793@yahoo.com	<p>There are already enough problems with the drinking water in New Jersey, let's not add more to the list. Also, building on buffer zones increases the risk of flooding. We are still rebuilding after Hurricane Sandy and cannot afford to experience even worse flooding again after the next serious storm.</p>
